

STORM DRAIN ART PROJECT

Turn Science Learning into Community Action!

Learn | Create | Act

Arizona Project WET has storm drain stencil kits and sidewalk chalk available for schools to check out—**free and on a first-come, first-served basis!**

Have your class transform a storm drain on your school campus into a place-based art project that connects water science with community stewardship. Students can use what they've learned about runoff, storm water, and pollution to create artwork that teaches others where water goes and why keeping pollutants out of our storm drains matters.

Before you begin:

Please obtain any necessary permission from your school administration or appropriate campus personnel.

When should you do it?

Incorporate the project wherever it fits best in your Water Festival Unit of Study—after Lesson 3, after the Water Festival, or as a culminating sustainability project.

We want to see your students' creativity!

Take photos of your completed project and share them with Arizona Project WET. We may feature your students' work on our social media and share it with local water municipalities and community partners.
